

Design and Analysis of Experiments

Course Intro

Version 2.11

Felipe Campelo

<http://www.cpdee.ufmg.br/~fcampelo>

Graduate Program in Electrical Engineering

Belo Horizonte
March 2015

“The combination of some data and an aching desire for an answer does not ensure that a reasonable answer can be extracted from a given body of data.”

John W. Tukey (1915 – 2000)
American mathematician

Course Overview

Objectives

- To develop advanced skills in designing experiments, defining and testing hypotheses, and performing statistical data analyses within one's field of interest;
- By the end of this course, the student should be able to:
 - Plan experiments related to his/her work;
 - Perform appropriate statistical analyses of the data obtained from the experiment;
 - Develop sound conclusions based on the available data;
 - Identify the problems and limitations of his/her own experiments, and suggest improvements;
 - Perform critical interpretations of other experimental methodologies and results reported in the literature.

Course Overview

Course Structure

- Lectures (10 weeks): discussions about several aspects and techniques for design and analyses of experiments. Theory, application examples and *computational case studies*;
- Final project presentations (2 weeks);
- Written exam (1 week);
- Tutoring (2 weeks);

Course Overview

Course Structure

Evaluation criteria

Item	Type	Value
Case studies	Classroom activity	40
Written exam	Written exam	30
Final Project	Report and presentation	30

Other relevant Information

- Lectures slides, example R files, data, etc. available at <https://github.com/fcampelo/Design-and-Analysis-of-Experiments>
(previous version: <http://ppgee.ufmg.br/~fcampelo/LNDoE>)
- Office hours: Mon (17:00h - 19:00h); Wed (18:00 - 19:00)
- Software/services used: R (<http://cran.r-project.org/>), GitHub (<http://github.com/>).

Course Overview

Required / Desired background

This is a course on *applied* experimental design and analysis. As such, a large portion of the course is dedicated to case studies in which the student will design experiments, collect (simulated) data, perform inference and report his or her analysis.

It is **strongly recommended** that the student should complete the free online course *R Programming*^b **before the end of the second week** of the semester (except if the student is already fluent with R).

It is also **strongly recommended** that the student should complete the free online course *Reproducible Research*^c **before the end of the first month** of the semester (except if the student is already fluent with writing reports using R Markdown).

About this material

Acknowledgments

Special thanks to:

- Prof. Claus Aranha (Tsukuba University), for discussions and contributions to this material;
- Ms. Fernanda Takahashi, for working on the initial English translation of the original slides;
- Previous students from the Graduate Program in Electrical Engineering (PPGEE/UFGM), in particular Bernardo Braga and David Pinto, for pointing out errors and helping me improve these Lecture Notes.
